

Radon Mitigation Technology Course (CERTI-2)

NOTICE: April 26, 2021

Notice to Individuals planning to sit for the NRPP Radon Mitigation Specialist Exam

NRPP has revised its radon mitigation exam and all candidates planning to sit for the exam after April 30, 2021 will be sitting for the new exam. According to NRPP, the new exam is more focused on skills needed in today's environment as well as expands upon aspects of operating a mitigation business such as recordkeeping.

To assist our students, we have revised Topic 11 within the CERTI mitigation course (CERTI-2) to reflect the skill domains now stated by NRPP and are the basis of the new exam.

- **If you have already completed Topic 11 but not yet generated your CERTI course certificate**, you will need to run through Topic 11 again including the quiz before the certificate will be generated.
- **If you have already generated your course certificate but not yet taken the NRPP exam**, we encourage you to complete Topic 11.

To see a list of job skills and exam make-up go to the following link.

<https://aarst.org/new-radon-measurement-mitigation-exams-go-live-may-1st/>

At this link you will see descriptions of two credentials: **Radon Mitigation Installer** and **Radon Mitigation Specialist**. The Mitigation Installer is a new lower tier credential that will be introduced in August of 2021 and therefore not currently available. The new NRPP exam is for the upper tier Radon Mitigation Specialist, which is what the CERTI course covers and prepares you for.

The CERTI course content is still very relevant and the revision within Topic 11 helps prepare you for the NRPP exam.

If you are planning to become certified by NRSB we have not been notified of any changes, so you are good to go.
